SPECSINTACT 4

Major Improvements

The introduction of SpecsIntact 4 ushers in some of the most significant changes in our software's history.

Users will find improvements throughout the program, and should consult the ReadMe file shipped with the software or the on-line Release Notes for a complete listing of enhancements.

This brochure outlines just a few of the major advancements you'll find as you use SI4.

SpecsIntact 4 Development Team

Kennedy Space Center, FL

Introducing...

SPECSINTACT 4

...includes the new SI Editor!

Highlights

Two of the biggest changes you'll notice in SI4 are:

♦ The SI Explorer includes a publish to Word option.

♦ The SI Editor has been fully revamped and features many new tools to make editing faster and easier.

Publish to Word

A popularly requested new function now available is the Word Publish feature, available from the Process & Print/Publish dialog box. Users can choose Microsoft Word as the output format for processed Sections or entire projects. The function parallels the existing option that publishes processed files to PDF.

With the advent of this new option, the auxiliary WordSpec editor has been eliminated. By using the improved SI Editor, users will complete all editing functions in SpecsIntact, and then if they choose, publish the processed files in Word format.

Note: All Tech Support for WordSpec will be completely phased-out by October 2003.

The introduction of SpecsIntact 4 ushers in some of the most significant changes in our software's history.

Editor Menus & Toolbars

The new Windows-standard menus and toolbar — as well as a redesigned, customizable tags bar — will be some of the first noticeable changes.

Editor's Reference Wizard

An exciting new feature of the Editor is the Reference Wizard. You can select REF, RID, RTL and ORG tags and content from this dual-paned dialog box.

Clicking an item in the left pane will display its contents in the right pane. Select the Reference you want by either *clicking* it in the right pane, then *clicking* the **OK** button, or by *double-clicking* it. The information and tags will be inserted at the cursor position in your Section. The system will prevent you from improperly placing these references in your document. You can choose References from any of the **Reference Lists** available on your system.

Other Editing Improvements

♦ **Search & Replace**

♦ **Change Case**

♦ **Reference Checking**

♦ **Add missing referenced Sections**

♦ **Improved Spell Checking**

♦ **Improved QA Reports**
